

LIQUID CRYSTAL DISPLAY DEVICE

ABSTRACT OF THE DISCLOSURE

The present invention provides a liquid crystal display
5 device comprising: a laminated protection panel composed of
a $\lambda/4$ -plate, a polarizing plate and a transparent protection
plate; a liquid crystal display; and a phase retarder;

wherein the laminated protection panel is disposed to
a top surface of a liquid crystal display with a distance, the
10 phase retarder is disposed between the laminated protection
panel and the liquid crystal display, and the sum($\alpha_A + \alpha_B$)
of a wavelength dispersion(α_A) of the $\lambda/4$ -plate and a wavelength
dispersion(α_B) of the phase retarder is in the range of 1.11
to 1.95. In this liquid crystal display device having a
15 transparent protection plate such as a touch panel, coloring
of a displayed view looked at in an oblique direction is improved
while maintaining a display quality in a front direction.
